Calibration				
1	2	3	4	5

Notes:

Ascending Water, the 4th month of the year, is the coldest month. The hottest day is in Descending Fire, the 15th month of the year. To balance the calendar somewhat, I assume the coldest day is usually around the 28th day of Ascending Water and the hottest is usually around the 1st day of Descending Fire.

I assume that the 1st day of each month is a new moon, so that in Exalted there is a strong reason for the word "new". Calibration is described as five moonless nights. I assume that during Calibration there are no stars in the sky, either, but that there are stars during the new moon, which would visibly mark the first night after Calibration (necessarily a new moon) as different. The 15th of each month would be a full moon. The 8th and 22nd of each month would be a half-moon. The 2nd and 28th of the month would be the thinnest crescent moon.
